

<https://www.dmctools.com/>

Daniels Manufacturing Corporation (DMC) is the recognized leading manufacturer of application tooling for the aircraft, aerospace, and high reliability electronics industries, with experience that spans seven decades. Our products have been used on virtually every Defense System, Aircraft Program, Land or Sea Going Transport System, Space Exploration Program, and in many other types of manufacturing and support activities.

Daniels Manufacturing Corporation has been a (QPL) authorized supplier of tools since the first QPL was established in 1971. DMC is dedicated to developing and supplying products for both OEM and maintenance operations.

The DMC lineup of wiring system products includes: hand operated, battery powered, pneumatic powered, hydraulic crimping tools, as well as, ergonomic solutions for wire termination and processing. DMC also specializes in an extensive line of connector backshell & torque tools, contact installing & removal tools, EMI/RFI shielding band tools, Alphasatron® wire crimp pull testers, fiber optic cleave tools, Safe-T-Cable™ tools & components for fastener security, wire strip & prep tools, as well as, maintenance support tool kits for aircraft and other high reliability systems.

We appreciate your continued support of DMC. Please feel free to contact us with all questions or needs you have in the areas of Tooling and Components for Aerospace or Transportation Systems Tooling. DMC is headquartered in Orlando, Florida, and all our products are proudly designed and manufactured in the USA.
